EXECUTIVE SUMMARY

- Creative business engineer with 4 working years, including a 3 years focus on large IT transformation projects in Financial Services (International Payments); passionate about innovations solving impactful business challenges (e.g. distributed ledger technology).
- Demonstrated ability to bridge Business and IT teams, including within an international and remote setting.
- Demonstrated leadership and entrepreneurship interest through side projects.
- Experience in business analysis and project management.

EXPERIENCE

01/2017 - Present

KPMG | Business Analyst **@Global Financial Telecom**

Develop and lead the service design of an innovative service within a strategic global initiative, aiming at improving the cross-border payments experience. This initiative helps addressing key industry challenges, such as faster cross-border payments, richer payment information, digital innovations and increasing costs.

08/2015 - 12/2016

KPMG | End-to-End Test Manager **@Global Banking Group**

Coordinate and support the development, execution of defined test plans designed to insure the functional viability of the entire solution along with its connexions with existing applications, processes and functionalities.

07/2014 - 08/2015

KPMG | Quality Assurance Engineer **@Global Banking Group**

Develop and execute relevant test cases to verify the functional viability of the solution (to improve the international payments experience of large corporates). I also deliver business requirements of a new functionality in the next release of the solution.

09/2013 - 06/2014

KPMG | IT Auditor

Provide assurance to the customers, auditors and regulators that processes and associated control environments have been implemented in a way that satisfies the risk and compliance needs of the organization. Projects covered numerous sectors such as: insurance, retail, pharmaceutical automotive and healthcare.

01/2013 - 05/2013

KPMG | Intern

Assistance with the further development and growth of the data analytics & process mining services within the IT Advisory team.

EDUCATION

09/2011 - 09/2013

University of Namur | MSc in Business Engineering

Thesis: "Organizational Decision-Making with Business Data Analytics: Models, Benefits and Risks"

08/2012 - 12/2012

NTNU | MSc in Business Engineering

Erasmus Exchange Program, Norway

09/2008 - 09/2011

University of Namur | BSc in Business Engineering

Information Management field

PROJECTS

09/2013 - Present

KPMG | Side projects on strategy & innovation

1. Development of the DLT service offering for Belgium. This ranges from the definition of the strategic vision to the growth of the capabilities, team and visibility, aligned with the local and global approach.
2. Support the development of the strategic vision and business plan for a new line of business around innovation and strategy while defining and initiating innovative projects (bottom-up).
3. Articulate presentation on innovative topics which were used with broad-audience (incl. C-level executives).

09/2010 - 09/2012

J.E.N Consult (ASBL) | Treasurer

The JEN Consult is a student-managed organization providing consulting services to SMEs. Its members are given the opportunity of a first real work experience. After 1 year as an active member, I was elected as the treasurer (member of the board of Directors) and helped organizing internal and external events. As we joined JADE Belgium in 2011, a fresh treasury approach and new processes were instituted.

09/2011 - 09/2012

Cercle Economique | Treasurer

Student association aiming at organizing activities inside and outside the campus. Worked with sponsors for the campaign funding. Events attracting from 100 to 5.000+ people.

EXPERIENCE (DETAILED)

01/2017 - Present

KPMG | Business Analyst @Global Financial Telecom

Develop and lead the service design of an innovative service within a major global initiative, aiming at improving the cross-border payments experience by delivering an enhanced value proposition for correspondent banking on several aspects such as speed, transparency and predictability. This initiative helps addressing key industry challenges, such as faster cross-border payments, richer payment information, digital innovations and increasing costs.

Responsibilities include:

- Customer consultations to understand the needs and collect relevant data for the creation of a business case
- Define priorities and deliver the design of key elements for first release
- Alignment with the different departments to land on a feasible design and high-level IT architecture
- Agree on a GTM, pricing approach and release planning

08/2015 - 12/2016

KPMG | End-to-End Test Manager @Global Banking Group

Coordinate and support the development, execution of defined test plans designed to insure the functional viability of the entire solution along with its connexions with existing applications, processes and functionalities.

Responsibilities include:

- Coordination of several teams from different entities and countries
- Define the test strategy and test planning
- Organize and lead reporting to higher management on progress, risks & issues
- Lead and facilitate workshops with key stakeholders
- Improve existing processes (through automation and redesigned processes)
- Support the execution of performance tests

07/2014 - 08/2015

KPMG | Quality Assurance Engineer @Global Banking Group

Develop and execute relevant test cases to verify the functional viability of the solution (to improve the international payments experience of large corporates). I also deliver business requirements for a new functionality in the next release of the solution.

Responsibilities include:

- Test expert
- Test data manager
- Business Analysis of an added-value service for the solution
- Performance testing (incl. VBA coding to generate batches of test cases)

09/2013 - 06/2014

KPMG | IT Auditor

Provide assurance to the customers, auditors and regulators that processes and associated control environments have been implemented in a way that satisfies the risk and compliance needs of the organization. Projects covered numerous sectors such as: insurance, retail, pharmaceutical automotive and healthcare.

Responsibilities include:

- Conducting the assessment and Testing of IT Application Controls and General IT Controls (ITAC / GITC)
- Participate into data analysis-focused projects (linked to SAP architecture)
- Participate in Intelligent Decision Support projects, focusing on providing value to the client via Analytics.

01/2013 - 05/2013

KPMG | Intern

Assistance with the further development and growth of the data analytics & process mining services within the IT Advisory team.

Responsibilities includes:

- Assist colleagues in delivering the analytics solutions and lead (and participate in) internal meetings and presentations
- Evaluation of business opportunities and tooling around data analytics & process mining along
- Assistance with the development of analyses for both risk management and performance (optimization) purposes
- Ad-hoc help at clients, with a business processes modelling focus

OBJECTIVES

- Joining a dynamic, high-paced environment that proposes diversity in tasks and locations (international exposure) and filled with inspiring peers.
- Creative aspects in the work, the opportunity to make tangible impacts and continuous learning are key elements.
- Management that would display clear vision & strategy on products and services while leaving the possibility to discuss it.
